[Distinction²: Scientific Normative Explanation is NOT Heuristic Understanding]

The explanation/understanding conceptual dipole, as all c-dipoles, is **asymmetrical** for the scientific observer-actor (phenomenological hysteresis process).

1/3

The normativity of a description is toward the general and uninformed public, so called "lay man", while the heuristic is toward informed peers only for stimulating meaning-making and creativity and which are aware of the complex context and subtle meaning conveyed.

2/3

Another common confusion in a technoscience facing its "saturation of disciplinary/ontological domains", trying to bridge non-ethically the mind-body problem, & at the same time unable to renew itself epistemologically toward an extended and second order 1P-3P epistemology.

3/3
