I'm really happy to see that more and more (professional) scientists begin to understand that PDP generic modeling is an heuristic to our 1P-3P phenomenological ana-logical cognitive style. But the cognitivist/realist (vs hermeneutic) approach of it is for me ethically dangerous.

<https://twitter.com/DrTomFroese/status/1765176090316935421>

That's why I'm really careful about any formalization of it, because it imply a de-construction of the self, which once unethically formalized (science > mathematics > leading to computation > leading to massive industrial instrumentalization), can only arm the social community.

The question is therefore that of limits (and blind spots): to what extent the anarchic mentality of scientific research, which I completely understand, is compatible with such an ethical commitment when (techno)science deals, as today, of “consciousness” and “self”?
