[ The Two Epistemological Technoscientific Ambiguities Leading to the Actual Confusion ]

This political ambiguity should be put in regard with two others, but epistemological this time:

1. The transjective ambiguity of Technics leading to the generalized technological confusion between object and subject, between models and conventional reality; Technics being processual and implicit/experiential, and so a blind spot of formal and normative classical science.2/4

2. The philo-scientific ambiguity of (first order) empiricism between the explicit scientific experimental and the implicit experiential, leading to a blurring lack of rigorous analytical distinction between 1st and 3d person perspective (Western rational Cartesian tradition).3/4

Both define a phenomenological bidimensional (formal quasi bidimension) obstacle repressing the advent of a more ethical and comprehensive, enacted and embodied second order 1P-3P technoscientific rationality<sup>2</sup>, of a lived and emancipatory technoscience.

4/4
