[Beyond Intentionality & Agency: Noetic Phenomeno-Epistemology] 🧵□

In my scybernethic enacted framework, I have developed what I called "Experimental and Experiential Epistemology", a way to study, explore and experience our (pre)noetic mind through computer simulations

of artificial cognition ("AI") and a-life models of emergences (CA, connectionist models, swarms, evolutionary processing, etc), based on iterative cycles of modeling/observations/phenomenological inquiry/comparative study with scholar literature.

Here's a thread expliciting some key points of this enacted (emergence through evolution) disciplined 1P/3P-Only (Phenomenology + Classical science) integrated conception:

https://www.perplexity.ai/search/explain-what-is-noetic-kOVyizpqR4aUqV_vUmtMlA

An initial and complementary explanation can be found in my initial exposure of scybernethic:

3.2.7 About enactive modeling and simulations: "From computers which think to computers

which make me think"
